SUMMARY

5 years of professional .NET development experience building desktop and instrument companion applications for scientific analysis and measurement systems.

Strong skills in C#, .NET, WPF, Angular.js, TypeScript, SQL, and test automation for high-quality, integrated software solutions.

EDUCATION

University of Queensland

Bachelor of Information Technology

Brisbane, QLD

Feb. 2018 – Dec. 2020

PROFESSIONAL EXPERIENCE

R&D .NET Software Engineer

Agilent Technologies | C#, WPF, .NET, Angular.js, TypeScript

LDIR8700

Particle imaging and identifying instrument using infrared laser

- Expanded functionality and maintained quality for the instrument's companion software
- Implemented an alternate scanning method to support a new sample holder design
- Improved software components including UI, database, and image processing
- Adapted software to compensate for hardware and internal component limitations

CARY3500

Chemical analysis instrument using UV-Vis laser

- Added features to the instrument's companion software to support new hardware capabilities and improve user workflows
- Developed custom Angular components to improve reporting capabilities
- Integrated Angular components with the C# back end, database, and compliance microservice
- Maintained software components and kept the tech stack up to date

Sep 2021 – Now

Melbourne, Australia

Sep 2021 - Sep 2024

OCT 2024 - Now

PROJECTS

Questionnaire Generator

 | *JavaScript, jQuery, SMART on FHIR, HTML/CSS*

Aug 2020 – Nov 2020

- Developed an EMR plugin for medical workers and patients to manage questionnaires using FHIR standards
- Implemented questionnaire generation and dynamic form rendering from FHIR questionnaire definitions using jQuery
- Formatted responses in FHIR format to provide in-app feedback and support downstream clinical workflows
- Received positive feedback from CSIRO and the UQ School of Medicine

2D Shooter Game

 | *C#, Unity*

May 2021

- Designed and developed a 2D top-down shooter in Unity with gameplay mechanics inspired by Alien Invaders
- Led a team of 3 to implement player controls, enemy AI, and polished UI elements

2D Platforming Game

 | *C#, Unity*

May 2021

- Built a 2D platformer in Unity focused on level design, player movement, and sound integration
- Collaborated with a team of 6 to create levels, UI, and the in-game audio experience

TECHNICAL SKILLS

Languages: C#, Java, Python, C, SQL, JavaScript, HTML, CSS

Frameworks / Platforms: .NET, WPF, Bootstrap, jQuery, Node.js, Express.js, Angular.js

Testing: Selenium, MSTests, Moq, Microsoft Fakes

Developer Tools: Git, GitHub, Subversion, Docker, VS Code, Visual Studio, IntelliJ, Unity, Trello, Google Colab

ADDITIONAL EXPERIENCE

Instructor

May 2019 – Sep 2019

Junior Engineers

Newmarket, QLD

- Taught programming to elementary and high school students
- Prepared teaching materials for the school term and holiday programs
- Managed classrooms of 10-20 students and assisted other instructors
